

Semantic Technology in Business Systems

Status & Prospects

John Davies

Chief Researcher, Semantic Technology

IT Research Centre, BT

Next Generation Web team

- BT Research
- Longstanding interest in semantic technology and its application
 - OntoKnowledge (1999)
 - Semantic Web-enabled Web Services (SWWS) (2001)
 - More recently, ACTIVE and SOA4All projects; many internal projects
- Increasingly also looking at Web 2.0 and its relationship with Semantic Technology

Overview

- **Brief introduction to semantic technology**
- Applications
 - Knowledge Management
 - Information Integration
 - Service-oriented environments
 - Business Intelligence
 - ICT Solution Design with Semantic MediaWiki
- Specific application in the health sector
- Semantic Technology uptake

Today's Web is...

- A place where
 - computers do the presentation (easy) and
 - people do the linking and interpreting (hard).
- *Why not get computers to do more of the hard work?*

Semantic Web

- Today's web
 - Machine-to-human – emphasis on presentation
- Semantic web vision
 - “an **extension** of the current web in which **information** is given well-defined **meaning**” (Tim Berners-Lee)
 - making web-based information **machine-processable**
 - `<bold>use bold font</>` → `<product-code>1234-6/A</>` (XML)
 - beyond XML - RDF, OWL ⇨
 - ontological languages
 - formal, supporting reasoning

Ontologies

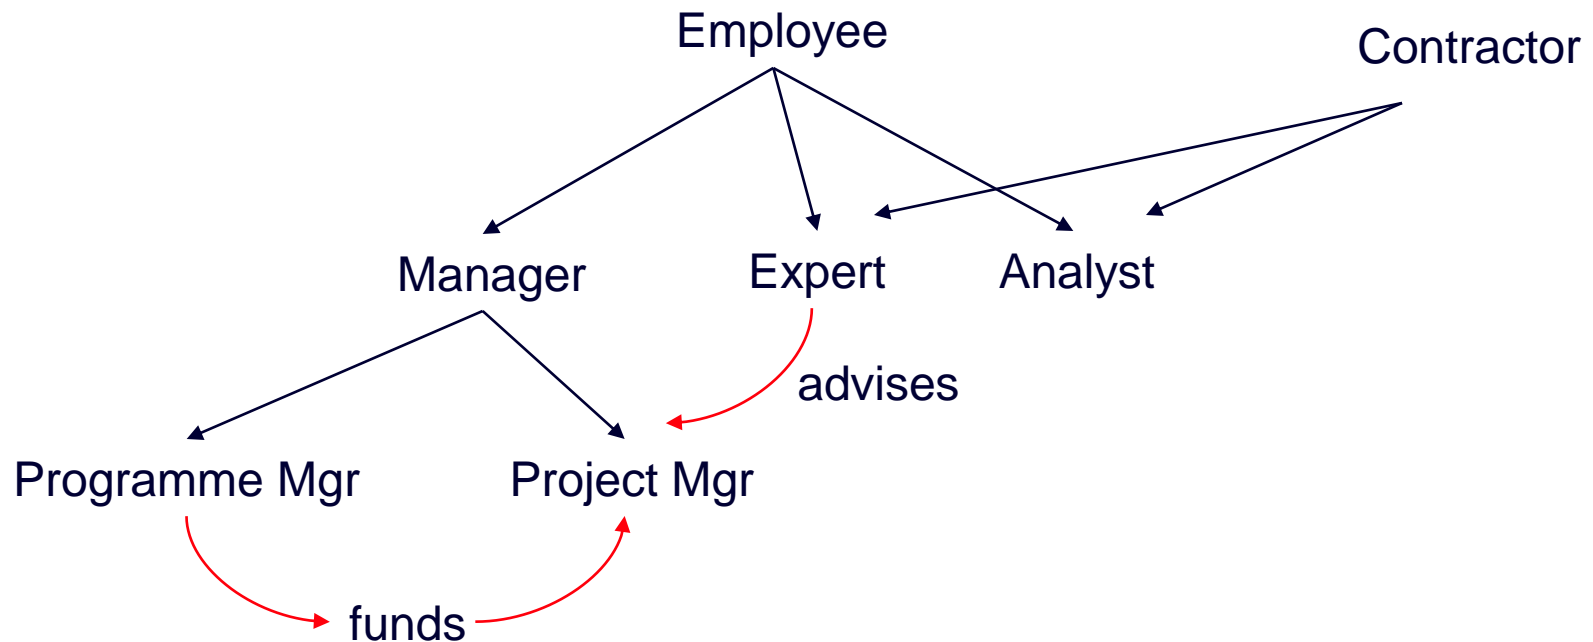

- An ontology describes a formal specification of a certain domain:
 - Shared understanding of a domain of interest
 - Formal and machine processable
(telecoms systems, gene structures, public services, ...)
- The notion of ontology is central to semantic web
- W3C has developed standards for describing web-based ontologies
 - Logic-based languages RDF and OWL
 - Specify ontologies and link them to information such as (parts of) web pages, web services, grid resource descriptions, process descriptions, ...

Ontologies & Taxonomies

Taxonomy is a classification system where each node has only one parent and the single relationship between concepts is “ako”
– simple ontology

Ontology of People and their Roles

Typically, we want a richer representation with more relationships between concepts: an ontology

Why develop an ontology?

- ***To define information (e.g. web-based) more precisely and make it more amenable to machine processing***
 - by linking data to a formal ontology
- To make domain assumptions explicit
 - Easier to change domain assumptions
 - Easier to understand and update legacy data
- To separate domain knowledge from operational knowledge
 - Re-use domain and operational knowledge separately
- To share a consistent understanding of what information means
- To allow reasoning about data

Ontologies and Description Logic

- Reasoning over ontologies
- Inferencing capabilities

$X \text{ co-wrote } D; Y \text{ co-wrote } D \Rightarrow$
 $X \text{ and } Y \text{ collaborate}$

$\text{Allergy}(X) \ \& \ \text{triggered_by}(\text{almonds}, X) \Rightarrow$
 $\text{Nut-allergy}(X)$

$\text{Supplies}(X, Y) \ \& \ \text{Supplies}(Y, Z) \Rightarrow$
 $\text{Supply-chain-partners}(X, Z)$

Semantic Web/Semantic Technology

- Ontological languages (the layer cake)
 - XML, RDF, OWL, Rules
- Ontology management techniques and tools
- Metadata extraction tools ('text analytics')
 - Computational linguistics
 - Knowledge discovery/text mining

Overview

- Brief introduction to semantic technology
- **Applications**
 - **Knowledge Management**
 - Information Integration
 - Service-oriented environments
 - Business Intelligence
 - ICT Solution Design with Semantic MediaWiki
- Specific application in the health sector
- Semantic Technology uptake

In three words

Semantic knowledge management classifies, finds, distributes, shares and uses knowledge based on meaning not the particular words used to represent meaning.

In three words

Semantic knowledge
management classifies, finds,
distributes, shares and uses
knowledge based on **meaning**
not the particular **words** used to
represent meaning.

Words and meanings

- same word, different meanings

Jaguar

- different words, same meaning

disability legislation

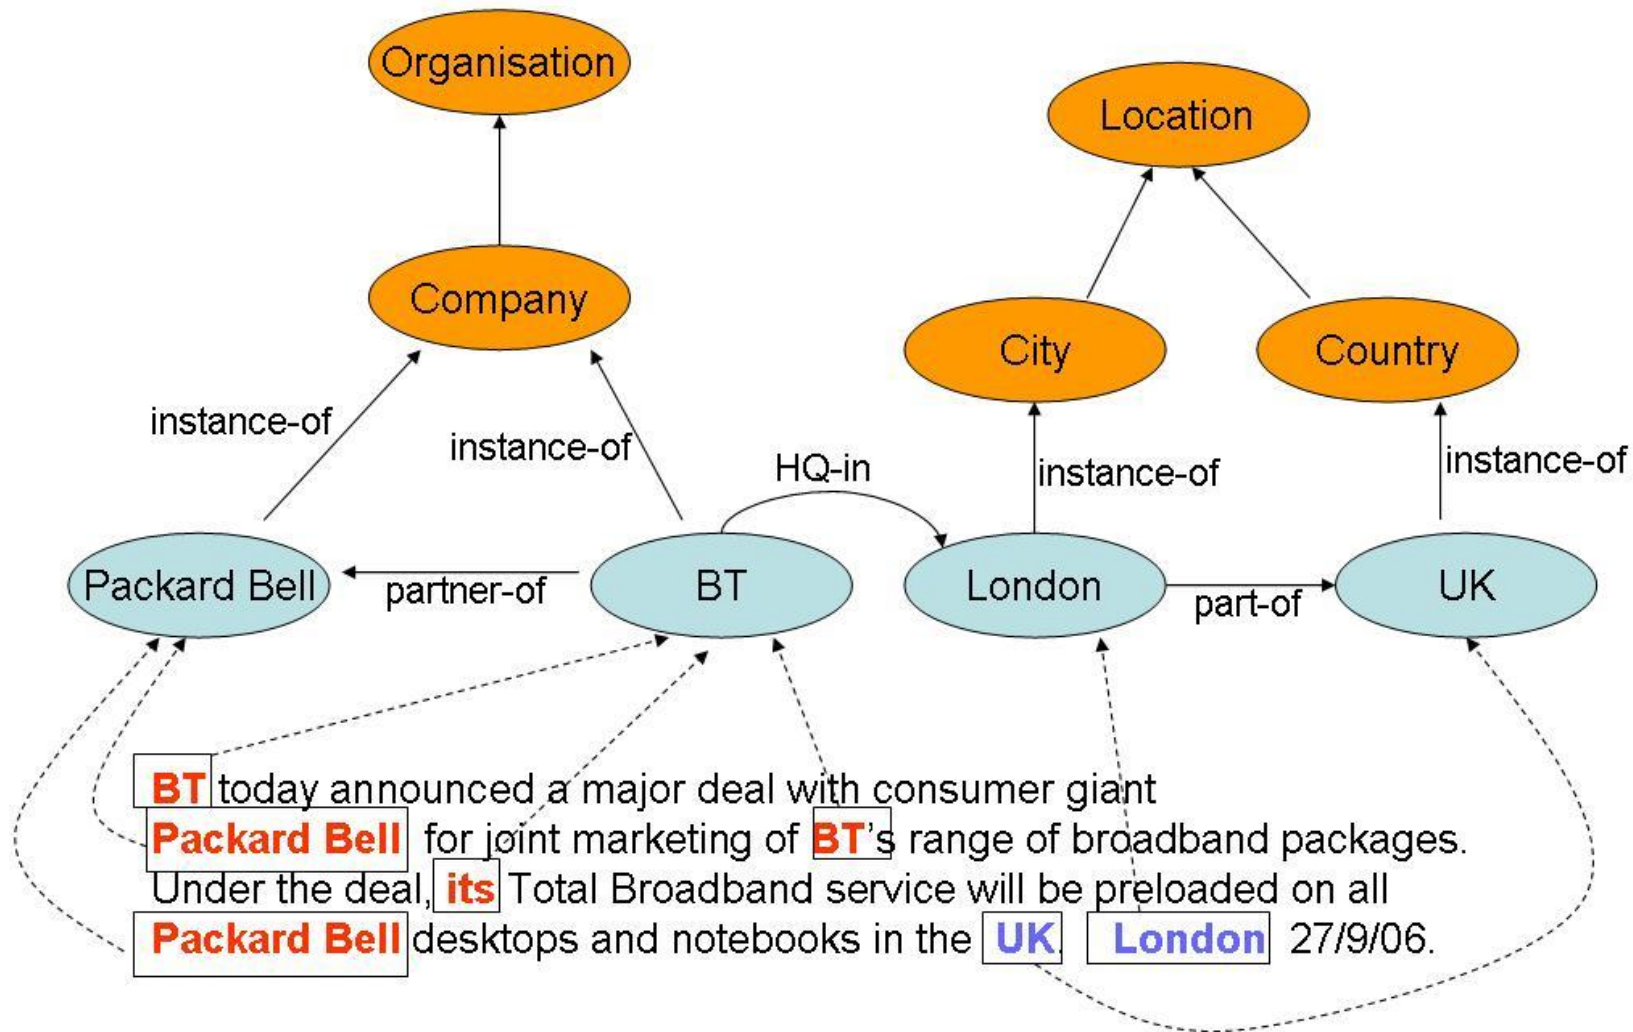

equal opportunity laws

- different words, related meaning

- leading to inheritance (and other) reasoning

Semantic Annotation

Semantic Browsing

South Korea fines Microsoft \$32m

Microsoft has been fined 33bn won (\$32m; £18.4m) following an antitrust ruling by South Korean regulators.

The US software giant was ordered to unbundle its messaging service from its Windows software by South Korea's Fair Trade Commission.

Regulators ordered Microsoft to introduce a version of Windows which enables the embedding of services by other software companies.

The news came as Microsoft announced plans to invest \$1.7bn in India.

Chairman Bill Gates said the company planned to increase its workforce in the country "to 7,000 over the next three to four years".

Microsoft Corporation is a Public Company located in United States and Worldwide.

Designs, develops, manufactures, licenses, sells and supports a wide range of software products. Its webpage is www.microsoft.com. It is traded on NASDAQ with the index MSFT. Key people include:

Bill Gates - Chairman, Founder

Steve Balmer - CEO

John Conners - Chief Financial Officer

Last year its revenues were \$36.8bn and its net income was \$8.2bn.

The screenshot shows a web browser window with a news article. The sidebar on the left lists various categories: E-Commerce, Economy, Companies, Fact Files, Politics, Health, Education, Science/Nature, Technology, and Entertainment. The main content area displays a news article titled "Microsoft \$32m" with a sub-headline "Microsoft was accused of 'hurting the interest of consumers'". The article text mentions "Regulators ordered Microsoft to introduce a version of Windows which enables the embedding of services by other software companies." and "The news came as Microsoft announced plans to invest \$1.7bn in India." A large orange arrow points from the text above to the browser window. The browser's address bar shows "Internet".

Precision in Semantic Web Search

- Semantic Search could match
 - a query: *Documents concerning a telecom company in Europe with a new director*
 - With a document containing: *"At its meeting on the 10th of May, the board of the UK company Vodafone appointed John Smith as Chairman"*
- Ontology-based search engines can do the required reasoning:
 - Vodafone is a mobile operator, which is a kind of telecom company;
 - Vodafone is in the UK, which is a part of Europe;
 - Chairman is a type of director

Semantic KM at BT

- SEKT FP6 integrated project (coordinator)
 - Completed 12/06
 - www.sekt-project.com
 - Semantic search tool in use internally
 - BT Digital Library
 - Expertise location
- ACTIVE FP7 IP (coordinator)
 - Began 1/3/08
 - www.active-project.eu
 - Integrating semantic web and web 2.0 technology
 - Modelling and managing knowledge processes

Overview

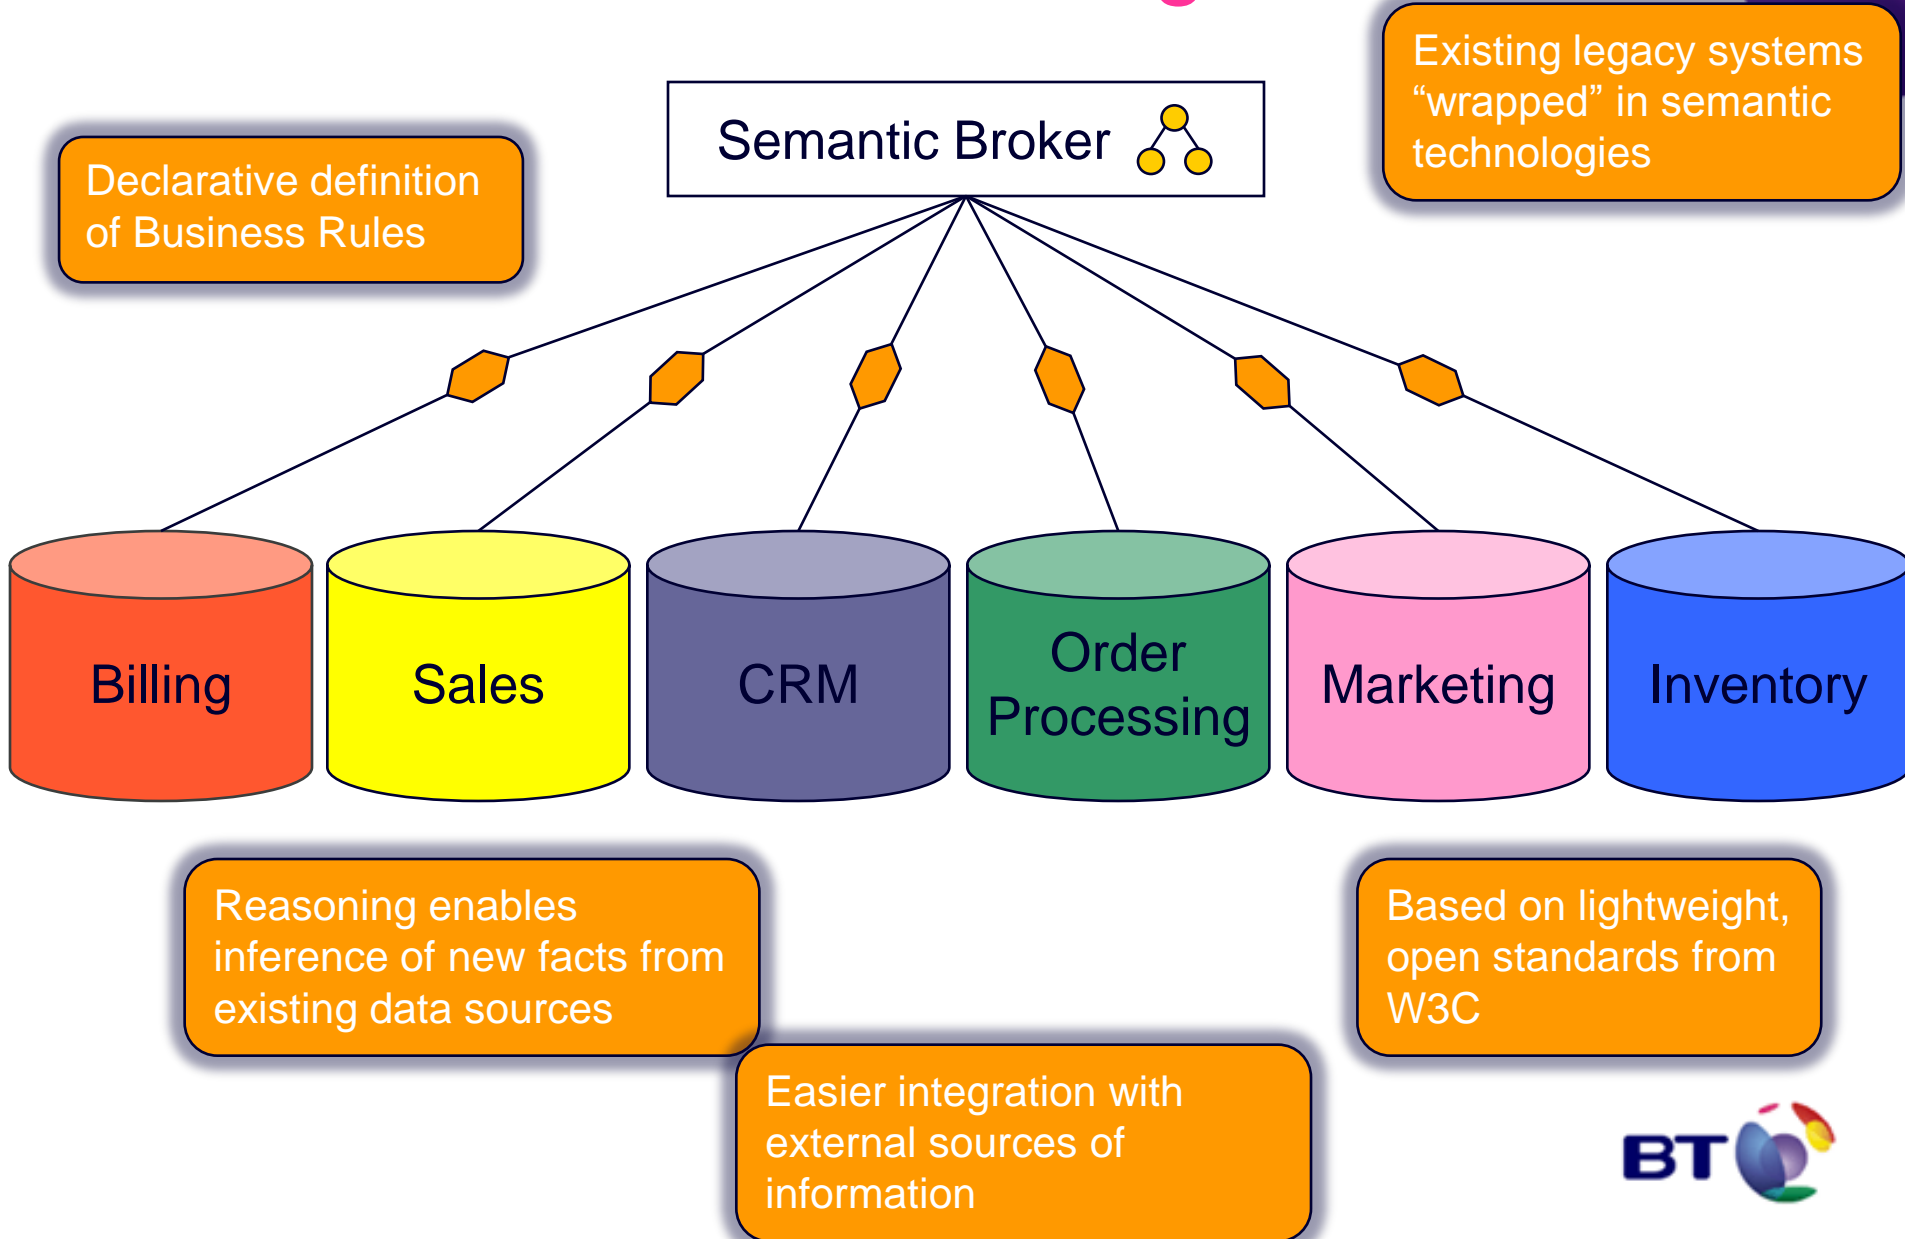

- Brief introduction to semantic technology
- **Applications**
 - Knowledge Management
 - **Information Integration**
 - Service-oriented environments
 - Business Intelligence
 - ICT Solution Design with Semantic MediaWiki
- Specific application in the health sector
- Semantic Technology uptake

Information Integration

43% of businesses resort to manual processes and/or new software when integrating information for reporting

Semantic Information Integration

Semantic Data Integration - results

- One BT Business division is saving a verified €2.9m p.a. through the integration of its sales and billing data silos
- Ongoing work to link further information sources for greater benefit
- Vision is to offer a complete view of all information about a customer via a single interface (sales, billing, CRM, marketing, ...)

Semantic VOIP management

- Business Opportunity
 - Dynamic and flexible management of BT VOIP platforms
 - Manage changing requirements (SLAs) from customers
 - Allowing real-time changes to SLAs and understanding impact
 - Automatically determining impact of network faults on customers VOIP service
- Solution
 - Unified Semantic Model of customers, network topology, calls data and SLAs (previously held in heterogeneous data silos)
 - Using logical reasoning to determine (in real time) the effects of changing circumstances, such as modifying SLAs

Research prototype developed

- semantic modelling of several legacy data sources
- impact of requested SLA changes can be modelled and changes to system configuration suggested
- rules and formal models allow new information to be inferred
- linking Network Topology and Customer Inventory in one Semantic Model gives greater power (such as ability to identify impact to customer of failed router)

Business Impact

- Research prototype delivered to internal customer
- Business Case accepted for deployment of full system in the BT Wholesale strategic IT stack
 - Mission critical deployment

Overview

- Brief introduction to semantic technology
- **Applications**
 - Knowledge Management
 - Information Integration
 - **Service-oriented environments**
 - Business Intelligence
 - ICT Solution Design with Semantic MediaWiki
- Specific application in the health sector
- Semantic Technology uptake

Motivation/Vision

Internet Today

- 1 billion users
- More than 30 billion pages (static)
- 30% pages built by companies
- Only 27.000 “true” web services
- Most of services are in-house or restricted to closed environments

amazon.com.

del.icio.us
social bookmarking

Future Internet

- 2-3 billion users
- Internet of millions of Services
- Mobile Internet
- A network of equals
- “Prosumers”

Software to Serviceware

- Computer Science is entering a new generation
- Previously: abstracting from hardware
- Now: abstracting from software
- All software resources as services in a *SOE*
 - The client needs a service, not software

=> From Software to **Serviceware**

Semantic Technology & Serviceware

Web Services
computational objects

Semantic Web Services -
intelligent service
discovery,
interoperation,
composition

WWW
static, unstructured info

Semantic Web
machine-
processable info

Semantic Service-oriented Architectures

- Semantic service descriptions
 - Functional and non-functional properties
- (semi-)automation of human intensive tasks
 - Service Discovery, Adaptation, Ranking, Mediation, Invocation
- Frameworks:
 - **SAWSDL (WSDL-S)**: Semantic annotation of WSDL descriptions
 - **WSMO**: Ontologies, Goals, Web Services, Mediators
 - www.wsmo.org

Semantic Serviceware

- On an Internet with
 - Millions of services
 - Millions of service prosumers
- Semantics will be essential
 - **Discovery**
 - **Interoperability**
 - **Scalability**

BT Ribbit Acquisition

- BT acquired **Ribbit** (www.ribbit.com) in 2008 for \$100m
- Ribbit has implemented and exposed a full set of lightweight RESTful telecoms services over the web
- **Ribbit** is a platform for building web-based Telco applications
- The Ribbit community is well established with >10000 developers
- SOA4All is investigating application of semantic technology to Ribbit

Next Generation Soft Telco (SOA4ALL EU Project)

Lowering the barrier to find and use services on the web

- Vision

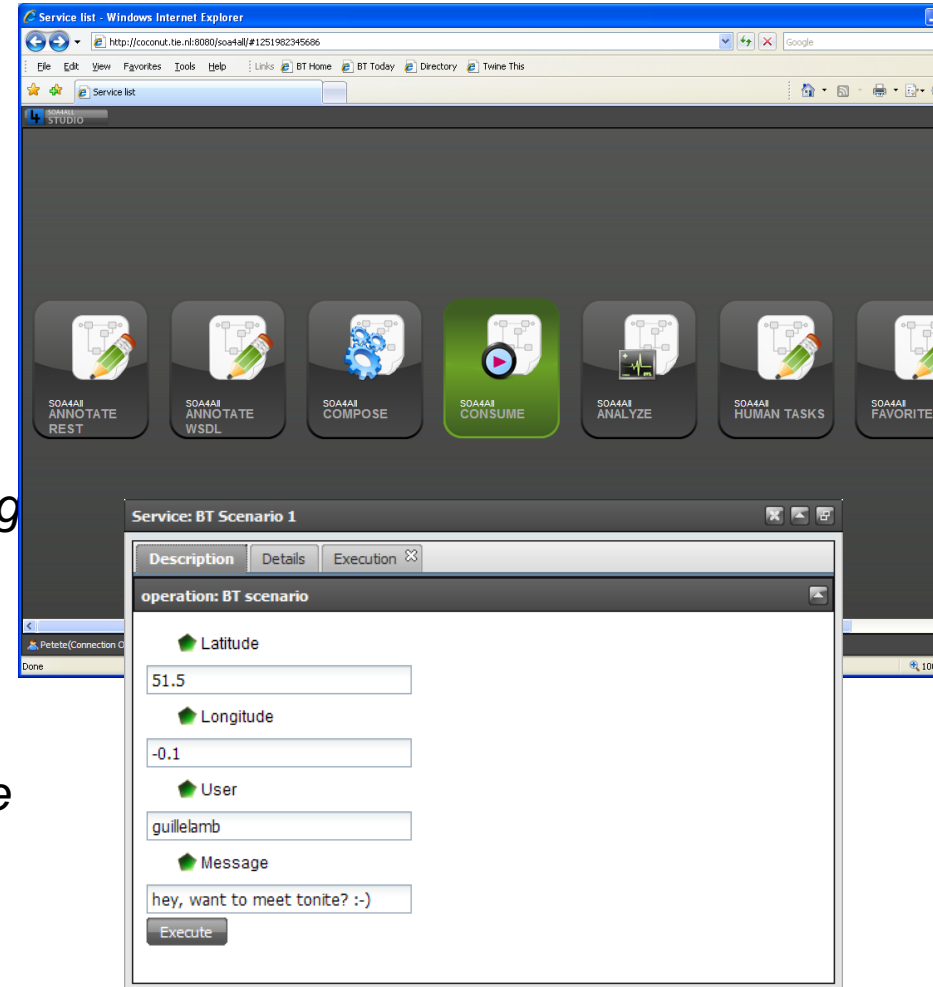

Allowing non-programmers to find and consume services on the web supported by communities, semantics and Web2.0-style interaction

- Benefit

Driving revenue from BT and hosted 3rd party services. Identifying best practice for Soft Telco

- Innovation

Combining community, semantics and context supported mashups - opening up new markets for service providers

Overview

- Brief introduction to semantic technology
- **Applications**
 - Knowledge Management
 - Information Integration
 - Service-oriented environments
 - **Business Intelligence**
 - ICT Solution Design with Semantic MediaWiki
- Specific application in the health sector
- Semantic Technology uptake

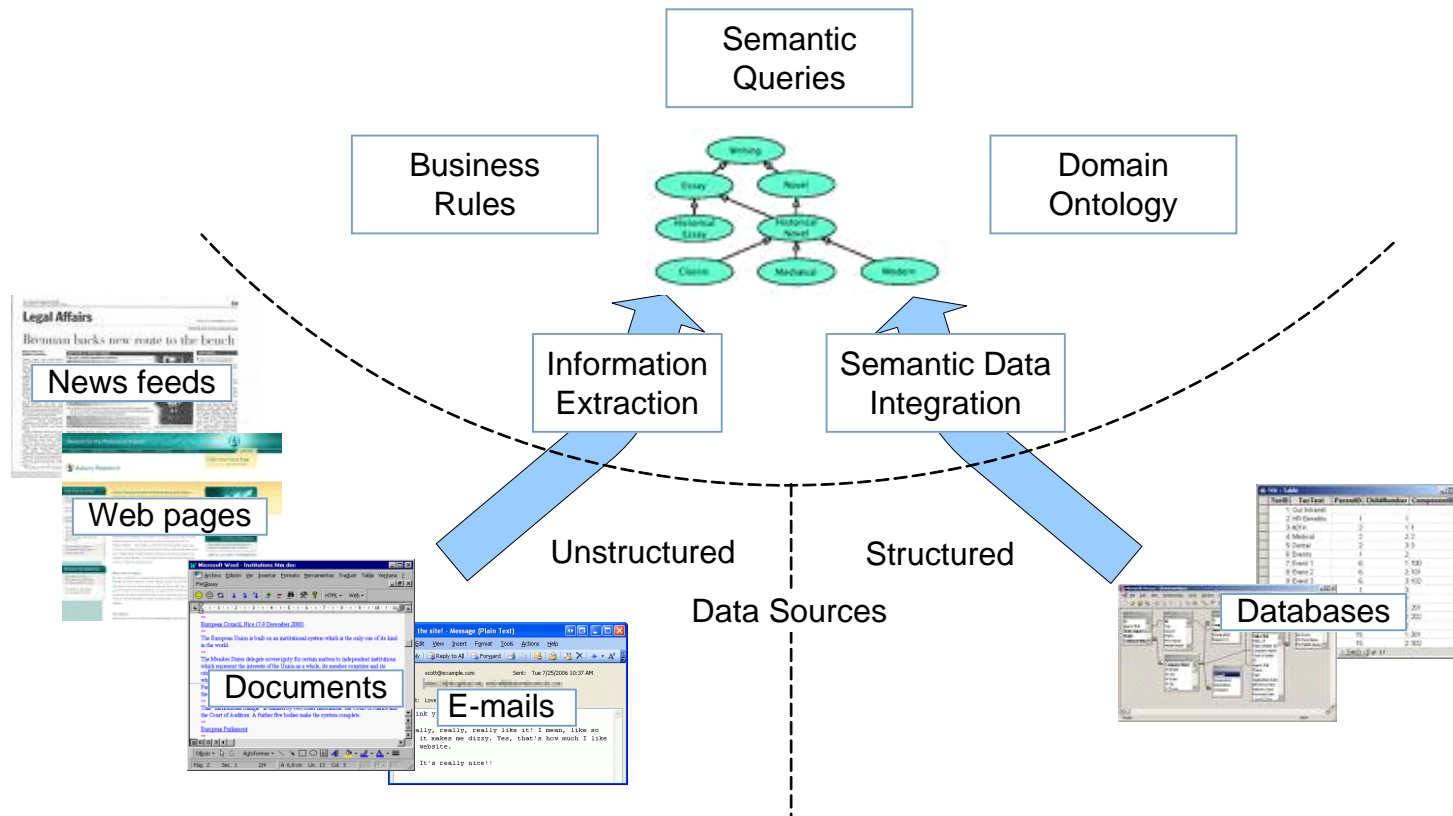

Semantic Business Intelligence

- Today's BI solutions
 - focus on an organisation's structured data (20%)
 - **ignore the 80%** unstructured information
 - webpages, emails, slides, documents, ...
 - **ignore the tens of thousands** of external items in news articles, customer forums, blogs, ...
- Semantic technologies can help
 - Information Extraction – identifying people, places, organisations, trends, sentiment in unstructured information
 - Information Fusion – uniform access to multiple heterogeneous (structured and unstructured) data silos

Semantic BI

Client Applications

Information Extraction - Event Recognition

...Last month, white knight AcqCo won the day with a £350m bid for TargCo...

...The bidding war for OldCo finished today when NewCo offered €1.2bn...

...OneCo and TwoCo will join forces to create the largest company in the Sector, valued at \$3.4bn...

Event	Acquirer	Acquiree	Mergees	Value	Date
Acquiistion	AcqCo	TargCo		£350m	November 2008
Acquisition	NewCo	OldCo		€1.2bn	14/12/08
Merger			OneCo, TwoCo	\$3.4bn	

Information Extraction – Sentiment Analysis

1. *...I have had Broadband Plus from NewCo for a month and I have found that their upload speed sucks...*
2. *...OldCo have launched a new suite of broadband services and I have got their Super offering. So far, I am reasonably happy with the service....*

Post	Author	Source	Brand	Topic	Polarity	Weight	Date
1	John Smith	TelcoBlog	NewCo	Broadband Plus	Negative	-4	November 2008
2	John Brown	TelecomForum	OldCo	Broadband Super	Positive	+3	10/12/08

Semantic BI – benefits

- Better use of unstructured information
 - Rationalization of unstructured data elements into disciplined data sets so that analytical tools may act on them as though they were structured
- Business intelligence products will incorporate better (semantic) search
 - Searching for meaning not the words used to represent the meaning
- Information fusion
 - Seamless simultaneous querying of multiple data sets (e.g. querying multiple data sources simultaneously to generate a report on a particular customer or product)
- Intelligent analysis of customer behaviour
 - Extraction of metadata revealing how users access the data (such as which products different shoppers compare in an online retail environment)
- Improved understanding of customer sentiment
 - Intelligent analysis of customer interactions giving interpretation of customers sentiment will overlay related structured data
- Exploitation of external information for enhanced BI
 - semantic technologies will analyze data from outside the enterprise (such as customer sentiment revealed in blogs and social networking facilities)

SBI Demonstrator

- 14000 blog posts, news items etc over 6 month period
- BT broadband services + 10 competitors
- Demonstrate how information extracted from unstructured text can be combined with database information to explore relationships between events and opinions, and business performance

Overview

- Brief introduction to semantic technology
- **Applications**
 - Knowledge Management
 - Information Integration
 - Service-oriented environments
 - Business Intelligence
 - **ICT Solution Design with Semantic MediaWiki**
- Specific application in the health sector
- Semantic Technology uptake

Solution Design - Challenges

- For large customers, BT often needs to combine multiple products and services in to complex ***solution designs***
 - Hard to publish information in a useful way
 - Difficult to find previous relevant designs
 - Hard to find people with relevant experience to the current design
 - Difficult to extract management information

Improving the Solutions Design process

An enhanced **semantic** wiki developed to provide:

- a collaborative forum for document creation and sharing
- a forms facility for easy information entry
- semantic data modelling
- the ability to model relationships
 - John Smith is an expert in MPLS
 - Cisco-9000 is a kind of router

***Semantic* Wiki:**

Answering Questions

- Allows information to be entered in a structured form
- Allows answers to questions like find...
 - ... all solutions involving IPX product
 - ... all project managers based in Germany
 - ... ten biggest bids in Latin America
 - ... all solution designers who have worked with Nortel

Semantic Wiki:

Reasoning & Maintenance

- Reasoning
 - France is in Europe; Paris is in France; John Norton has worked on a solution design for Paris Metro
 - John Norton has worked on solution design in Europe
- Maintenance
 - Does every bid have one bid manager?
 - Is there a service with more than one owner?
 - Does every project have a start date and end date and is the end date later than the start date?
 - Are all service bundles consistent?
 - Do all service bundles offered in Germany consist only of services available in Germany?

Due date 2009/08/12

Executive summary [\[edit\]](#)

Customer vision	Currently, Smith and Williamson have internet connectivity to their Head Office in Edinburgh via a 2M Internet circuit provided by Cable & Wireless. Due to an increase in traffic and the need to be flexible as the business grows, Smith and Williamson would like to explore alternative suppliers that can provide flexibility as well as resilience in their solution.

Proposal: Smith and Williamson - BidUnit

Customer's needs	Flexible/resilient Internet connection to Smith and Williamson's head office.
BT's high level solution	BT recommends that Smith and Williamson migrate their services to BT Net Premium service, giving better Service Level Agreements and Service Level Guarantees. Failover circuit to provide full resilience.
Compliance with customer request	This needs to be discussed. Comments welcome.

Customer issues [\[edit\]](#)

Description	1) Business likely to grow by 15% over next six months. Expected increase in Internet traffic to be discussed with Smith and Williamson. Who is the best person to contact? Suggest that you contact Nick Bracewell - 0131 123 4567
Solution and benefit	To be discussed once we know expected increases in Internet traffic.
Proof	To be considered

Description	2) Resilience is very important to Smith and Williamson. What services are BT currently offering, and at what cost?
Solution and benefit	To be discussed/agreed with specialists.
Proof	To be discussed

Benefits

- Easy information entry
 - consistent format
 - shared repository
- Improved knowledge re-use
 - easy to find relevant previous work
 - easy to find people with relevant experience
- Improved management information
 - better access to info through structured queries
 - ‘how many solutions involve service X’
 - ‘how much Y do we sell in North America’

Overview

- Brief introduction to semantic technology
- Applications
 - Knowledge Management
 - Information Integration
 - Service-oriented environments
 - Business Intelligence
 - ICT Solution Design with Semantic MediaWiki
- **Specific application in the health sector**
- Semantic Technology uptake

BT Global Services

- Provides networked IT solutions for multi-site organisations (>35% total BT revenue)
- The Health division has a prominent role in ~€10bn UK NHS National Programme for IT
- ~€3bn of contracts for
 - Networking
 - National application service provider
 - Local application service provider for London

Health IT is heterogeneous & distributed

Hospital
ward

Community
health

General
practice

Pharmacy

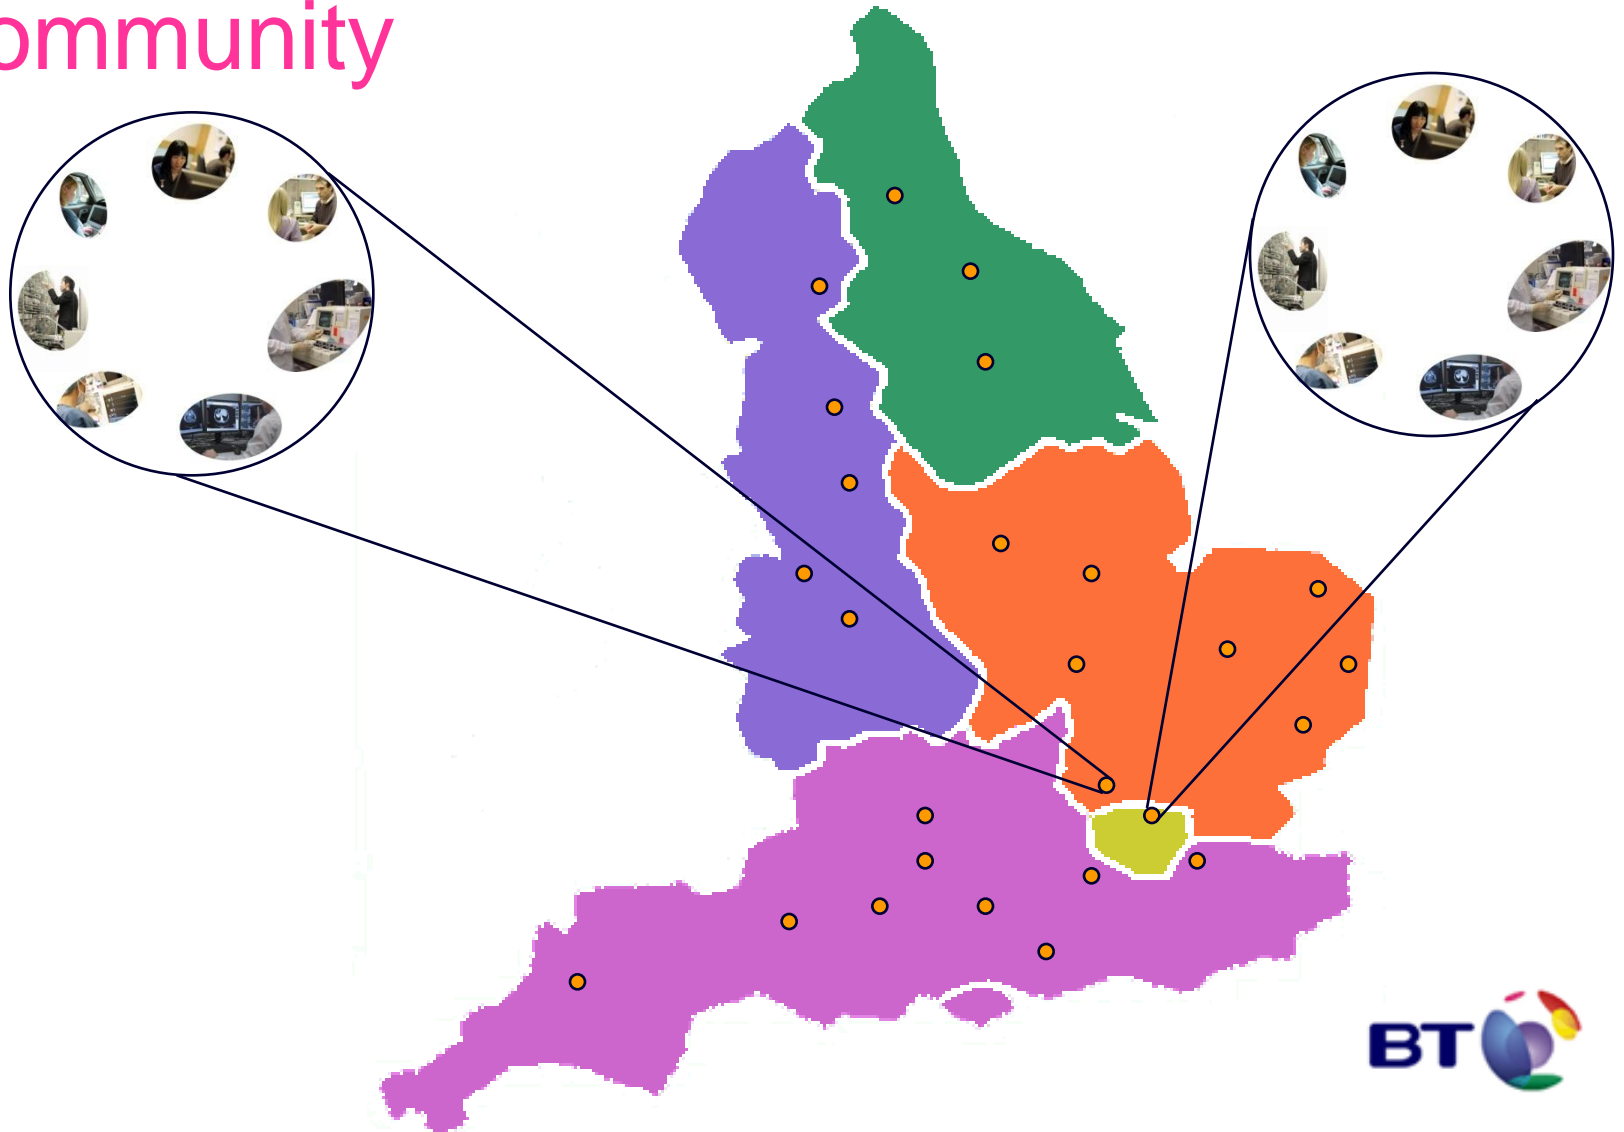

Surgery

Radiology

Pattern repeated in each health community

Patient centric Health IT

Patient journey

NHS Connecting for Health

- **National Care Records Service**

- A live, interactive patient record service accessible by health professionals whether they work in hospital, primary care or community services

- The core of the NHS CRS is provided by the **Spine**

- Central summary record

- Detailed patient information stays local

- records of detailed history of care, medical conditions, tests, X-rays scans and other results.

⇒ A large distributed system containing semantically heterogeneous information that must be integrated to some degree around individual patient care, with aggregated data sent to the Spine

Tools for Healthcare IT Integration

- **SNOMED-CT** - Consistent use of medical vocabulary
 - Systematised Nomenclature Of Medicine - Clinical Terms
 - Merger of UK and US efforts with a joint editorial board
 - Original development – College of American Pathologists
 - Now managed by an international organisation based in Denmark
 - Large reference terminology (>400,000 concepts)
 - Aim to be machine interpretable for the exchange, aggregation, analysis of clinical data and to enable clinical decision support

⇒ *semantic technology!*
- **HL7 v3** - Consistent messaging between applications
 - Specifications for consistent exchange of information between clinical applications
 - SNOMED-CT provides a vocabulary whilst HL7 provides the data model with which messages are built

Patient centric Health IT

HL7 messages containing SNOMED-CT terms

Semantic Technology & Health

- SNOMED-CT
 - Standard medical ontology (a “terminology”)
 - 400000+ concepts
- Now expressed formally in OWL
 - Reasoning
 - Consistency checking

SNOMED-CT & OWL

SNOMED-CT

- Concept based
- Clear separation of lexical representation and conceptualisation
 - **Whipple's procedure** and **pancreatoduodenectomy** terms represent the same medical concept
 - **Cold** can mean **cold temperature** or a **common cold**

OWL

- SNOMED concept directly corresponds with **OWL Class**
 - `Class(Appendicectomy)`
- **RDFS label** can be used to represent term labels (synonyms)

Pure subsumption hierarchy

SNOMED-CT

- has an '*is-a*' relationship equivalent to logical implication / subsumption
- A patient with asthma implies a patient with a respiratory disorder

Asthma is-a Respiratory-disorder

OWL

- Corresponds to OWL subclass
 - `SubClassOf(Asthma Respiratory_disorder)`

Composite Concepts: Property based definitions

SNOMED-CT

- Relationships with other concepts that partially or fully define the concept of interest
- Description logic reasoner used to classify concepts

OWL

- Can be modelled as existential restrictions
- Description logic reasoner used to classify classes

*An **appendicectomy** is defined as a surgical procedure using the method **excision** at the site **appendix structure***

*EquivalentClasses(**Appendicectomy**
ObjectIntersectionOf(**Surgical_Procedure**
ObjectIntersectionOf(
ObjectSomeValuesFrom(**procedure_site Appendix_Structure**)
ObjectSomeValuesFrom(**method Excision**))))*

Post coordination

SNOMED-CT

- Not designed to be complete ‘out of the box’
- Extensible at the point of data entry through ‘post coordination’

*Concepts for **kidney**, **excision**, and **left** exist: can create a new concept ‘left kidney excision’*

*intersectionOf(Excision
restriction(procedure-site someValuesFrom
intersectionOf(kidney
restriction(laterality someValuesFrom left))))*

OWL

- Corresponds to anonymous class expressions of OWL-DL

Semantic reasoning at point of care

- Description Logic reasoning is required in the live environment
- Why do you need semantic reasoning in the live environment?
 - *Post coordination* (i.e. allowing users – clinicians - to create new terms)
 - Can never enumerate all required medical concepts in advance
 - New concepts are created by combining and/or extending old terms and reasoning determines the correct logical place for new concepts
 - Creation of new anonymous class expressions (in OWL speak)

1 Clinician records clinical data using novel
expression e.g. patient has almond allergy
`Allergy+caused_by+almond`

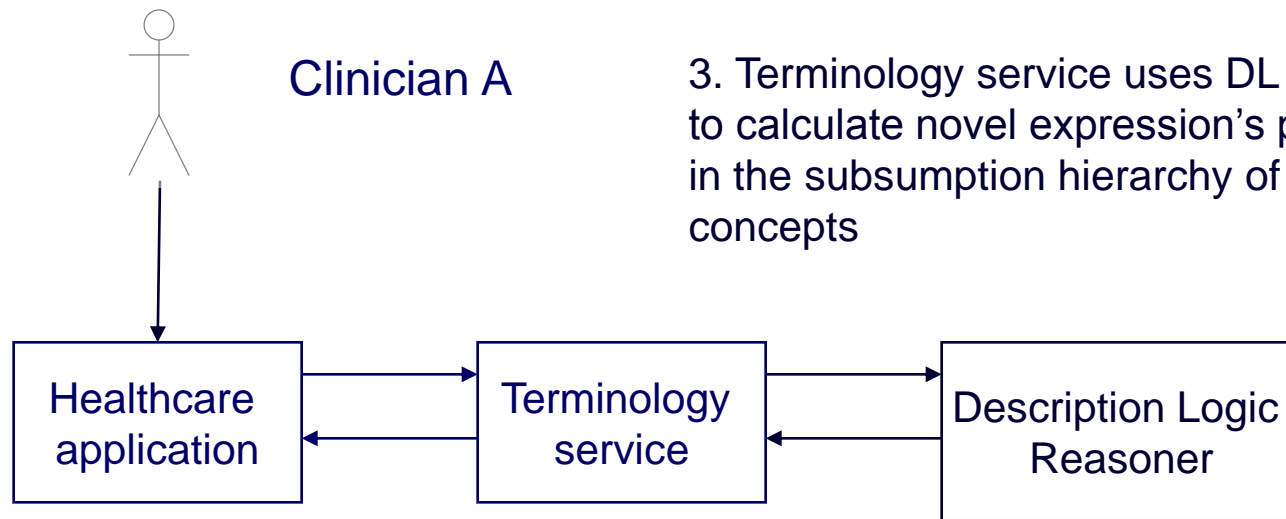

Clinician A

2. Application registers novel expression with terminology service

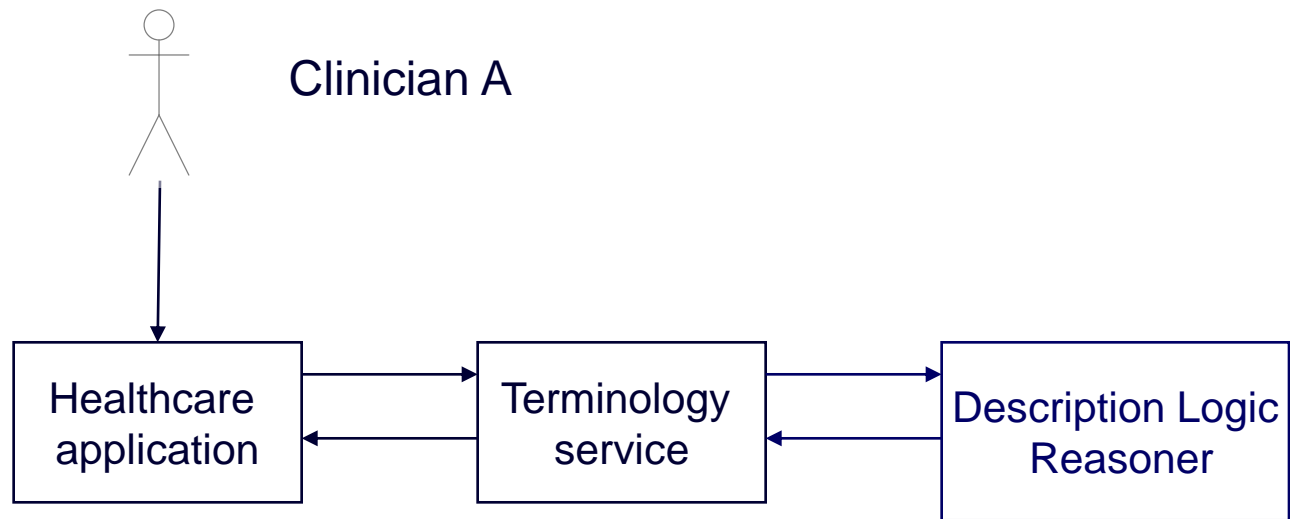

Clinician A

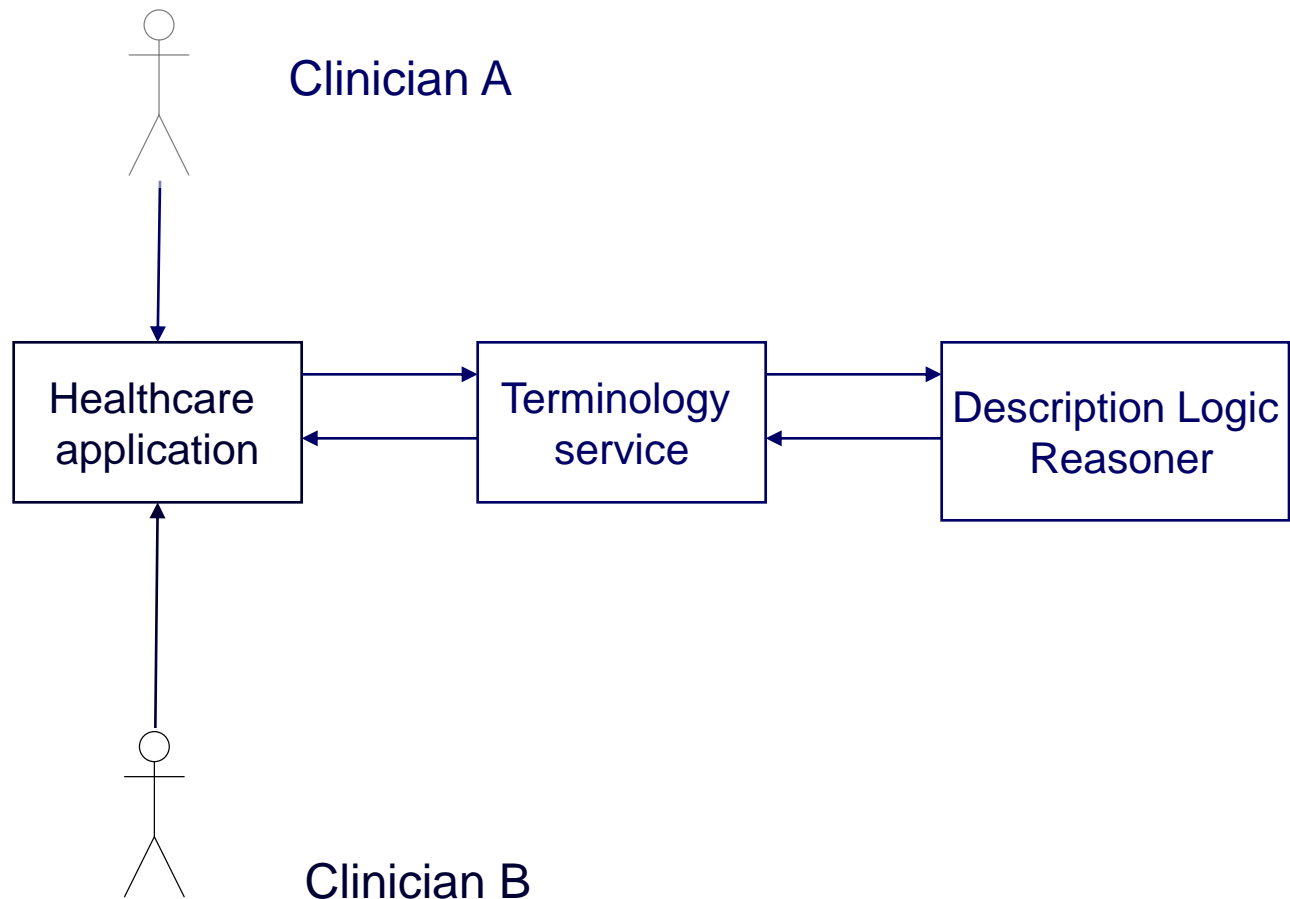

3. Terminology service uses DL reasoner to calculate novel expression's position in the subsumption hierarchy of existing concepts

NB Specification of property values make this a non-trivial task

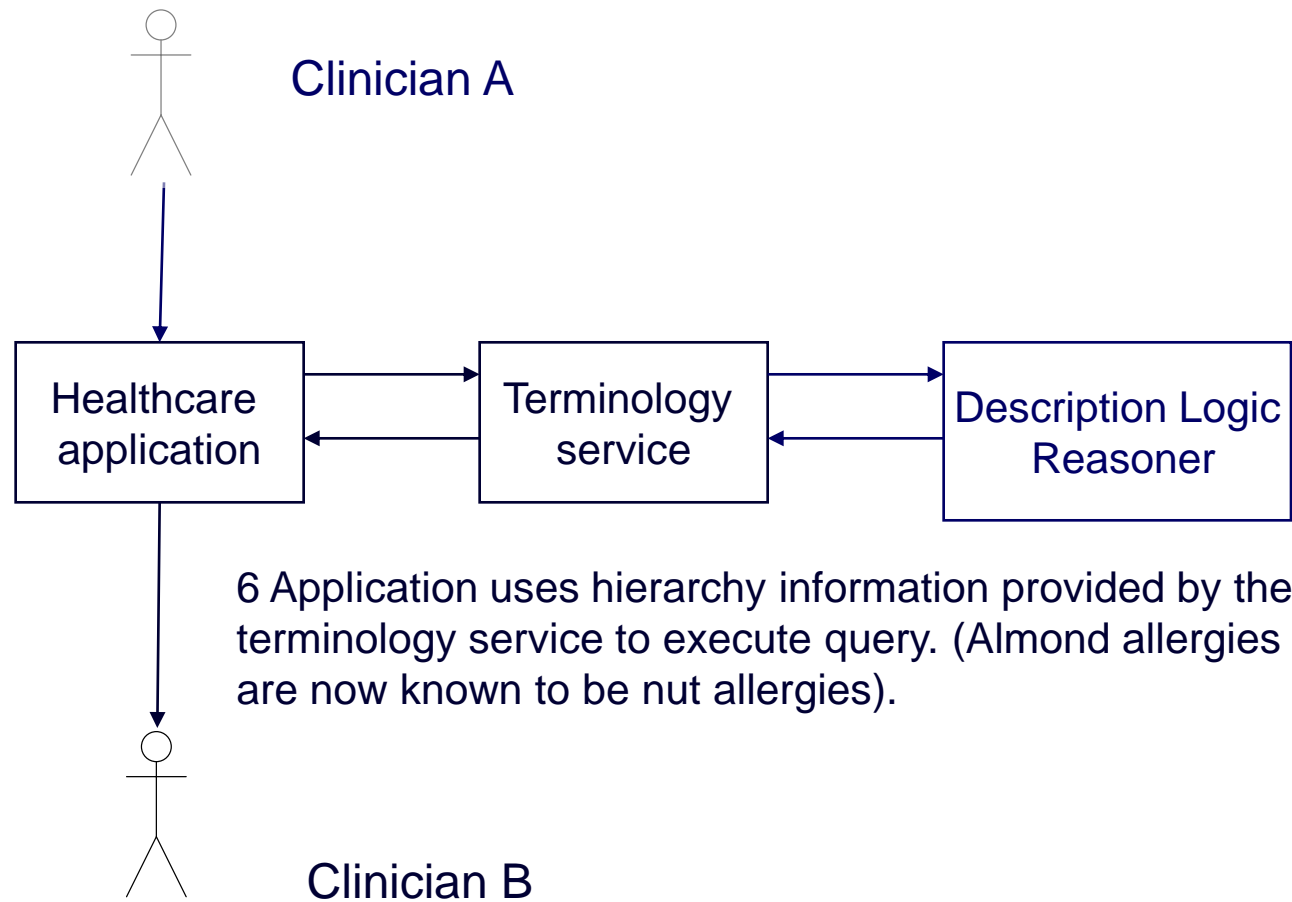

4. Terminology service provides information to application on the subsumption hierarchy including the position of the novel expression e.g.

```
allergy+caused_by+almond is-a  
nut allergy
```

5 Clinician queries for patient data which contains novel expressions e.g. Which patients have nut allergies?

Semantic reasoning – example 2

A procedure involving a laparoscope is a keyhole procedure: how is the system to determine the number of keyhole procedures if not explicitly stated to be such?

By use of a rule which states that use of laparoscope implies procedure was a laparoscopy, which is a kind of keyhole procedure

Pre-coordination

Hernia Repair

Access Instrument?

Laparoscope
(implies keyhole procedure)

Post-coordination

Q: How many
'Key hole'
procedures?

Progress in BT

- Proof of concept using Semantic technology
 - evaluating a range of reasoners
 - FaCT++ Description logic reasoner from University of Manchester
 - ~30 mins to initially load over 400,000 concepts in SNOMED-CT
 - <10ms to calculate subsumption of simple anonymous class expressions shown in example above
- Work now handed over from research to development team

Overview

- Brief introduction to semantic technology
- Applications
 - Knowledge Management
 - Information Integration
 - Service-oriented environments
 - Business Intelligence
 - ICT Solution Design with Semantic MediaWiki
- Specific application in the health sector
- **Semantic Technology uptake**

Semantic Technology uptake

- Semantic Technology is going mainstream..
 - Oracle – adoption of RDF in 10g
 - Reuters – all its information now available in RDF via Calais
 - ***“Oracle Integrates Semantic Data into Workflows Using OpenCalais”***
 - BBC: programme information in RDF
 - Much start-up activity
 - *Radar Networks, Ontoprise, Ontotext, Metatomix, SEMgine, Hakia,*
 - SNOMED-CT, GO – the Gene Ontology,
...

ORACLE

Semantic Technology uptake

- Semantic Technology is going mainstream..
 - Microsoft \$100m acquisition of Powerset
 - Yahoo!/Google also active
 - Search Monkey & Rich Snippets
- Organisations which can help
 - ST International (www.sti2.org)
 - W3C (www.w3c.org)
- European Semantic Technology Conference
 - Real-world applications of semantic technology
 - Vienna, December 2-3 2009, www.estc2009.com

A couple of (non-)controversies

- Web 2.0 renders the Semantic Web redundant
 - Both are concerned with metadata (tags/ontological)
 - A continuum
 - Tag clouds for photos
 - RDF for Open Calais
 - OWL-Full for life-critical health ontologies
- ‘Bottom-up’ versus ‘Top-down’
 - Appropriate technology for the task at hand
 - Massive annotation of text – bottom-up
 - Gene Ontology – top-down
 - OntoGen – combines the two – generates an ontology bottom-up from a corpus, to be refined ‘top-down’ by human

Semantic Technology uptake

- Semantic Technology has applications both on and beyond the web
- Many sectors are using the technology today
 - See <http://www.w3.org/2001/sw/sweo/public/UseCases/> for 26 further case study examples
- “Semantic technologies could revolutionize enterprise decision making and information sharing”
- PWC Technology Forecast, Spring 2008
